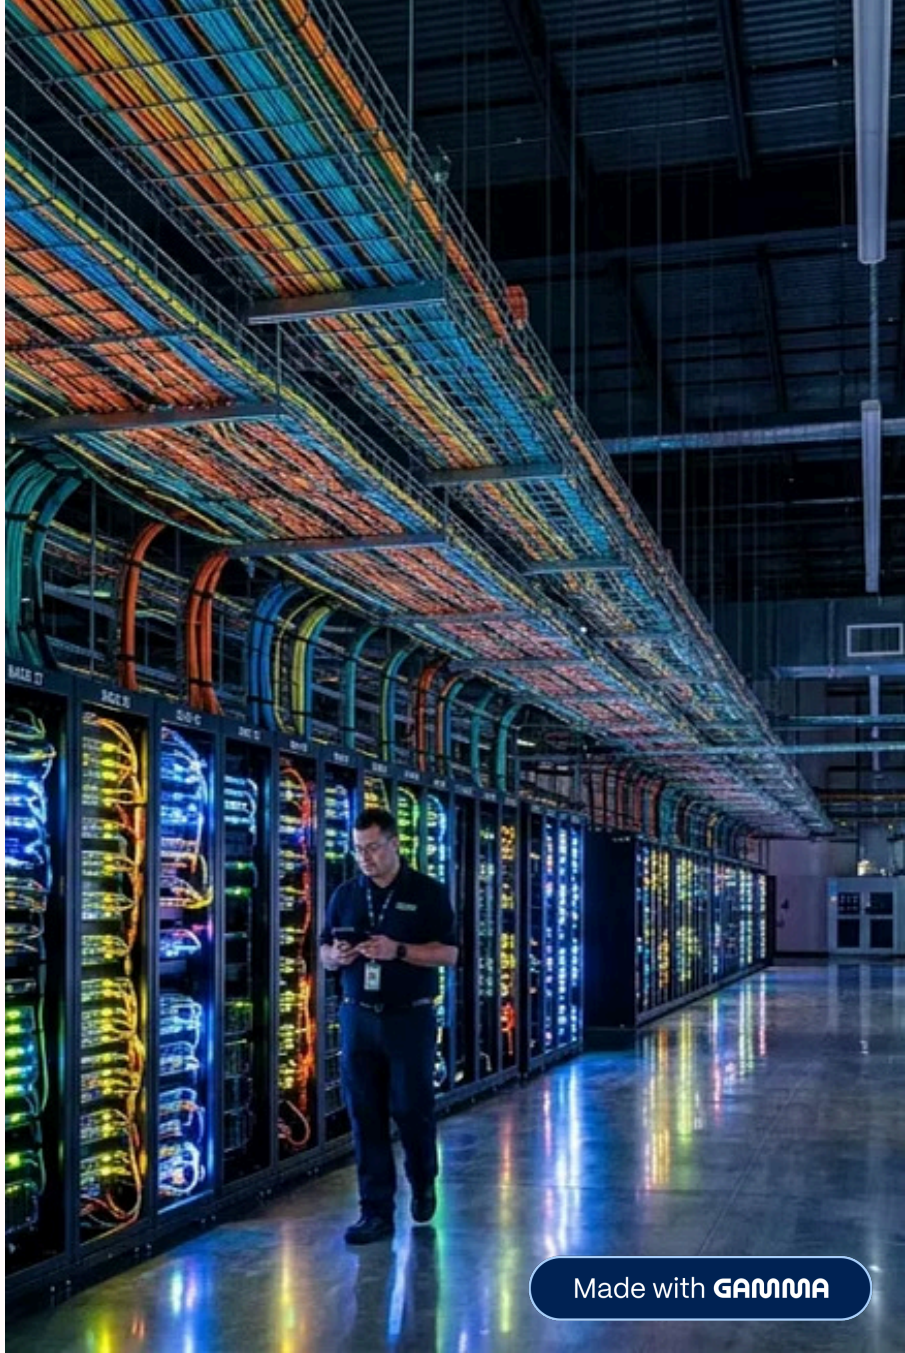
Future-Ready Data Center Infrastructure Solutions

Secure • Connected • Intelligent

Presented by **ScreenCheck Saudi** — your trusted partner for enterprise-grade infrastructure that powers the digital economy.



Made with GAMMA

Why Infrastructure Matters More Than Ever

The pace of digital transformation has accelerated dramatically. Organizations across every sector are under pressure to deliver higher network availability, stronger cybersecurity, faster service delivery, and seamless smart building integration — all while controlling costs and meeting increasingly stringent compliance requirements. Infrastructure is no longer a back-office concern; it is a strategic business enabler.

Higher Network Availability

Business-critical applications demand 99.9% uptime or better. Any interruption translates directly into lost revenue, damaged reputation, and operational disruption. Modern infrastructure must be engineered for resilience from the ground up.

Stronger Cybersecurity

Physical and logical security must converge. Unauthorized access to server rooms, patch panels, and network closets represents a critical vulnerability that legacy infrastructure simply cannot address.

Scalable IT Infrastructure

Growth should never be constrained by your infrastructure. Scalable cabling, modular rack systems, and flexible networking allow organizations to expand capacity without costly rebuilds.

Lower Operational Costs

Intelligent infrastructure reduces the total cost of ownership through simplified management, reduced downtime, longer equipment lifecycles, and streamlined maintenance processes.

The Core Challenge: Many organizations still rely on outdated, fragmented infrastructure that limits growth, increases operational risk, and creates compliance gaps. Modernizing this foundation is not optional — it is urgent.

Made with GAMMA

The Infrastructure Challenges Organizations Face Today

Outdated infrastructure creates a compounding set of problems that affect both IT operations and broader business performance. Understanding these challenges is the first step toward building a more resilient, efficient, and secure environment.

IT & Technical Challenges

- **Network Downtime** — Unplanned outages caused by aging hardware, poor cabling, or inadequate redundancy directly impact service delivery and SLA compliance.
- **Poor Cable Management** — Disorganized cabling increases troubleshooting time, raises the risk of accidental disconnections, and impedes airflow in server rooms.
- **Security Risks** — Unauthorized physical access to infrastructure creates vulnerabilities that no firewall can fully mitigate.
- **Aging Infrastructure** — Legacy systems are harder to maintain, lack modern security features, and often fall short of current compliance standards.
- **Multiple Vendors** — Managing disparate suppliers leads to accountability gaps, inconsistent support quality, and integration complexity.
- **High Operating Costs** — Inefficient infrastructure drives up energy consumption, maintenance overhead, and staffing requirements.

Business Impact

Technical infrastructure failures cascade into measurable business consequences that extend far beyond the IT department:

Productivity Loss

Network outages and slow connectivity halt employee workflows, reducing output across the entire organization.

Revenue Loss

For transactional businesses, every minute of downtime represents direct, quantifiable revenue impact.

Security Vulnerabilities

Weak physical and logical access controls expose sensitive data to internal and external threats.

Compliance Issues

Regulatory frameworks in banking, healthcare, and government demand documented, auditable infrastructure controls.

Poor Customer Experience

Service disruptions and slow response times erode customer trust and damage brand reputation over time.

The ScreenCheck Approach: A Complete Infrastructure Partner

ScreenCheck Saudi does not simply supply products — we deliver **integrated infrastructure solutions**. Our end-to-end methodology ensures that every engagement begins with a deep understanding of your requirements and concludes with a fully operational, supported environment. We act as a single point of accountability across the entire infrastructure lifecycle.

Assessment

Comprehensive audit of existing infrastructure, identifying gaps, risks, and opportunities for improvement.

Design

Tailored solution architecture aligned to your business objectives, compliance requirements, and growth plans.

Product Selection

Curated selection of best-fit products from our portfolio of authorized global brands.

Deployment

Professional installation by certified engineers with minimal disruption to ongoing operations.

Integration

Seamless integration with existing systems, ensuring interoperability and unified management.

Support

Ongoing technical support, warranty management, and proactive maintenance to protect your investment.

One trusted partner for your complete infrastructure journey — from initial consultation through long-term operational support.

Made with GAMMA

Our Infrastructure Portfolio: Complete Enterprise Solutions

ScreenCheck Saudi offers a comprehensive portfolio spanning four core infrastructure domains. Each category is supported by authorized global brands, certified solutions, and deep technical expertise — giving organizations a single source for all their infrastructure requirements.

Data Center Infrastructure

The physical foundation of every modern IT environment. Our data center solutions ensure reliability, organization, and scalability.

- Structured Cabling Systems
- Server Infrastructure & Rack Solutions
- Intelligent Cable Management
- Power Distribution & Cooling

Security & Access Control

Protecting your most critical assets — both physical and digital — through layered, intelligent security infrastructure.

- Access Control Systems
- Identity Management
- Visitor Management
- Multi-Factor Authentication

Networking & Connectivity

High-performance networking infrastructure that connects your organization with speed, reliability, and intelligence.

- Enterprise Networking Solutions
- Fiber Optic Connectivity
- Smart Infrastructure Management
- High-Density Connectivity

Communication Systems

Unified communication infrastructure that connects people, spaces, and systems across your entire organization.

- BAS-IP IP Intercom Systems
- SPON Audio & PA Solutions
- IP-Based Communication
- Building Automation Integration

Made with GAMMA

Global Technology Partners: Trusted International Brands

ScreenCheck Saudi has established authorized partnerships with world-leading infrastructure manufacturers. Each brand has been selected based on proven reliability, enterprise-grade performance, global certifications, and a commitment to innovation. These partnerships ensure that our customers receive genuine products backed by manufacturer warranties and ongoing technical support.

Our Authorized Brands

ID LOOP

Advanced identity management and access control solutions for enterprise environments.

ICT

Premium structured cabling and data center infrastructure components.

D-Connect

High-performance connectivity solutions including fiber and copper systems.

ATOM

Intelligent rack solutions and data center management hardware.

SPON

Professional IP audio, public address, and communication systems.

BAS-IP

Leading IP intercom and video communication solutions for buildings.

Why These Brands?

Every brand in our portfolio meets rigorous selection criteria designed to protect your investment and ensure long-term performance.

Proven Reliability

Each product line has a documented track record in demanding enterprise deployments across multiple industries and geographies.

Enterprise Performance

Products are engineered to meet the performance, density, and durability requirements of large-scale infrastructure projects.

Global Certifications

All products carry relevant international certifications including ISO, TIA/EIA, and industry-specific compliance standards.

Long Product Lifecycle

We partner with manufacturers committed to long-term product availability, protecting your infrastructure investment over time.

Innovative Technologies

Our partners invest continuously in R&D, ensuring their product lines incorporate the latest advances in connectivity, security, and management.

Industry Solutions: Designed for Every Sector

ScreenCheck Saudi's infrastructure solutions are engineered to meet the specific demands of each industry vertical. Whether you operate a mission-critical data center, a regulated financial institution, or a multi-site commercial portfolio, our solutions are configured to address your unique compliance, security, and operational requirements.

Government & Public Sector

Secure facilities requiring the highest levels of physical security, access control, and audit compliance. Our solutions support classified environments with multi-layer authentication and visitor management.

Banking & Financial Services

Critical infrastructure demanding zero-downtime availability, robust security controls, and full regulatory compliance. Our solutions protect transactional systems and customer data.

Healthcare

Reliable communication and infrastructure supporting patient care, clinical systems, and facility management. IP intercom and access control ensure secure, efficient hospital operations.

Education

Campus-wide security, communication, and networking infrastructure that protects students, staff, and assets across distributed facilities and multiple buildings.

Airports & Transportation

High-throughput identity management, access control, and communication systems designed for the complex security and operational demands of transportation hubs.

Hospitality & Commercial Buildings

Smart building solutions integrating access control, IP communication, and infrastructure management to enhance guest experience and operational efficiency.

Data Centers

Mission-critical environments requiring precision cabling, intelligent rack management, environmental monitoring, and physical security at every layer of the infrastructure.

Business Benefits: What You Gain

Investing in modern, integrated infrastructure delivers measurable returns across both operational and financial dimensions. ScreenCheck Saudi's solutions are designed to reduce risk, improve performance, and lower total cost of ownership — providing a clear path to a stronger return on infrastructure investment.

Operational Benefits

99.9% Availability

Engineered redundancy and high-quality components minimize unplanned downtime and protect service level agreements.

Improved Security

Layered physical and logical security controls reduce the attack surface and protect critical infrastructure assets.

Simplified Management

Unified infrastructure platforms reduce administrative overhead and provide centralized visibility across all systems.

Faster Deployment

Pre-engineered solutions and certified installation teams accelerate time-to-value for new infrastructure projects.

Better Scalability

Modular architecture allows capacity to be added incrementally, supporting organic growth without costly rebuilds.

Future Expansion

Forward-compatible infrastructure supports emerging technologies including IoT, edge computing, and AI workloads.

Financial Benefits

Beyond operational improvements, modern infrastructure delivers tangible financial advantages that strengthen the business case for investment:

99.9%

Uptime Target

Industry-leading availability reduces revenue-impacting downtime events.

30%

Cost Reduction

Typical reduction in maintenance overhead through intelligent infrastructure management.

10+

Year Lifecycle

Enterprise-grade products deliver extended operational life, deferring replacement costs.

Reduced Downtime Costs

Proactive infrastructure management and high-quality components dramatically reduce the frequency and duration of service interruptions.

Lower Maintenance Overhead

Intelligent cable management, organized racks, and remote monitoring reduce the time and cost of routine maintenance activities.

Higher ROI

Integrated solutions from a single partner eliminate vendor fragmentation costs and deliver better total cost of ownership over the asset lifecycle.

Why ScreenCheck Saudi: More Than a Distributor

ScreenCheck Saudi is not a transactional supplier — we are a **long-term technology partner**. Our team combines deep technical expertise with extensive Saudi market knowledge to deliver solutions that are precisely matched to your environment, your compliance requirements, and your strategic objectives. From initial consultation through ongoing support, we remain accountable for the success of your infrastructure.

Our Core Strengths

01

Authorized Global Brands

Direct partnerships with leading manufacturers ensure genuine products, full warranty coverage, and access to the latest product innovations.

02

Certified Solutions

Our engineers hold manufacturer certifications across our entire brand portfolio, ensuring expert-level design and installation.

03

Consultative Sales Approach

We begin every engagement with a thorough requirements analysis, ensuring our recommendations are driven by your needs — not our inventory.

04

Technical Experts

Our team includes certified infrastructure specialists with hands-on experience across data center, security, networking, and communication domains.

05

Project Support

Dedicated project management ensures on-time, on-budget delivery with clear communication at every stage of implementation.

06

After-Sales Service

Our commitment extends well beyond installation. We provide ongoing technical support, warranty management, and proactive maintenance services.

07

Enterprise Experience

Proven track record delivering complex infrastructure projects across government, banking, healthcare, education, and commercial sectors in Saudi Arabia.

08

Saudi Market Expertise

Deep understanding of local regulations, compliance requirements, and market dynamics ensures solutions are fully aligned with Saudi business environments.

Made with GAMMA

Let's Build Your Infrastructure Together

Modernizing your data center and enterprise infrastructure is one of the most impactful investments your organization can make. With ScreenCheck Saudi as your partner, you gain access to world-class products, certified expertise, and a commitment to long-term success. We are ready to help you build infrastructure that is secure, scalable, and future-ready.

Enterprise-Grade Products

Authorized products from globally recognized manufacturers, backed by full warranties and manufacturer support.

End-to-End Implementation

From initial assessment through design, deployment, and ongoing support — we manage the entire lifecycle.

Dedicated Account Management

A single point of contact ensures consistent communication, fast response times, and personalized service.

Long-Term Partnerships

We invest in relationships, not transactions. Our success is measured by the long-term performance of your infrastructure.

Ready to modernize your IT infrastructure? Partner with **ScreenCheck Saudi** for secure, scalable, and future-ready Data Center Infrastructure Solutions. Visit us at **screenchecksaudi.com** or explore our full product catalog at **screenchecksaudi.com/products**.
